In a recently published article by Harvard Business Review, Affiliate Professor Prashant Yadav elaborates on the challenges of COVID-19 vaccine distribution. The development of possible vaccines for the COVID-19 virus are advancing at a record pace, raising hopes that a vaccine will be available for large-scale distribution in 18 to 24 months. When a vaccine arrives, global distribution must happen on an equitable basis. To achieve this, the authors identified five investment priorities: financing the purchase of vaccines, strengthening and protecting the health care workforce, creating a system for reliably identifying the residents of developing countries, leveraging data to predict behaviour, and establishing reliable supply chains.
