The Business Foundations Certificate
Idex SUPER programme Investissements d’avenir.
INSEAD in collaboration with Sorbonne Université offers the Business Foundations Certificate (BFC) programme tailored for recent master or PhD graduates from the sciences, medicine, humanities, engineering and law.

The programme:

• provides an understanding of business that is complementary to applicants’ disciplinary expertise,
• supports candidates’ transition to a business career,
• facilitates aspiring entrepreneurs to fulfil the goal,
• helps you navigate and succeed in today’s constantly changing, high-pressure and volatile business world.

This certificate will be offered:

• In English by international faculty
• 4-month part-time Business education (Fr & Sat) in Paris
• Gives access to INSEAD’s Alumni Network
• Internship agreement

Prices and Markets
Ultimately, it is the prices paid and charged by an organisation that determine how economic value is divided between the business, its consumers and its suppliers. This course teaches you how to use structured thinking based on microeconomic theory to understand how economic fundamentals – such as demand, cost, market structure and government policy – shape the prices that prevail in a market.

New Business Ventures and Corporate Entrepreneurship
This course synthesises many of the fundamentals studied in the other classes as you examine the process of converting an opportunity into a profitable and sustainable new business. You will focus on the principles of building an enterprise on its own, in addition to the unique challenges of carrying out entrepreneurial activities within an existing organisation (in other words how to start a business inside a corporation without “getting yourself killed in the process”).

Financial Markets and Valuation
This course covers fundamental concepts in corporate finance and capital markets. The goal is to give you a set of tools and analytical frameworks that will provide useful, regardless of your eventual career. We cover basic valuation concepts and techniques such as “time value of money” and discounted cash flows (DCF). You will gain an understanding of how to make value-creating investment decisions and how to use the DCF approach to value a company.

Managerial Accounting
In this course we study the use of accounting information for internal planning, decision-making and performance evaluation. An internal accounting system serves two fundamental purposes. First, it supports decisions about products, processes, assets and customers. Second, it plays a key role in providing incentives to managers at all levels – and evaluating their performance. This course focuses on both – and reveals how many organisations have failed to provide their managers with useful information in the past.

Organisational Behaviour
The purpose of this course is to increase your effectiveness and skill in observing, understanding and leading behaviour in organisations. It is a class in applied behavioural science, which takes ideas and frameworks from psychology, social psychology and sociology – and explores their implications for leadership and managerial practice.

Financial Accounting
Accounting is the language of business. And financial accounting is about communicating in that language to people outside your organisation. Understanding how accountants decide what information to report, how they aggregate it and the uses to which it can (or cannot) be applied is one of the fundamental building blocks of any business education.

Managing Customer Value
Imagine you want to start your own business to sell a new product or service. First you must understand the market you are going to operate in. How big is it? Is it growing? What is the competition like? But this knowledge is not helpful without a second step: understanding how customers make their choices and how to “segment” them. Third, you must develop your long-term marketing strategy – by choosing a target segment and defining the benefits of your product or service for these customers. Fourth you must make your tactical decisions – about how to communicate, deliver and capture the customer value. Finally you have to monitor performance continually. These steps are at the heart of marketing management.
